### **Through Hole Lamp** LTL-R14FEGAJHBPT

#### 1. Description

CBI (Circuit Board Indicator) is a black plastic right angle Holder (Housing) which mates with Lite-On LED lamps. Lite-On CBI is available in a wide variety of packages, including top-view (Spacer) or right angle and horizontal or vertical arrays which is stackable and easy to assembly.

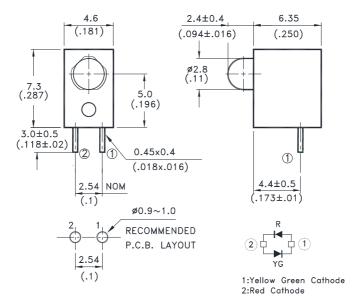

#### 1.1. Features

- Designed for ease in circuit board assembly.
- Black case enhance contrast ratio.
- Low power consumption & High efficiency.
- Lead free product & RoHS Compliant.
- T-1 lamp: emitted colors are Yellow Green/Red bi-color & White Diffused lens.
- It is in tape and reel packing.

#### 1.2. Applications

- Computer
- Communication
- Consumer
- Industrial

#### 2. Outline Dimensions

#### Notes:

- 1. All dimensions are in millimeters (inches).
- Tolerance is ±0.25mm (.010") unless otherwise noted.
- The Holder (Housing) material is plastic, black / dark gray color.
- LED is Yellow green/Red bi-color & White Diffused lens.
- 5. Specifications are subject to change without notice.

### Through Hole Lamp LTL-R14FEGAJHBPT

### 3. Absolute Maximum Ratings at TA=25℃

| Parameter                           | Red                     | Yellow Green | Unit |  |  |
|-------------------------------------|-------------------------|--------------|------|--|--|
| Power Dissipation                   | 52                      | 52           | mW   |  |  |
| Peak Forward Current                | 60                      | 60           | mA   |  |  |
| (Duty Cycle≤1/10, Pulse Width≤10ms) |                         |              |      |  |  |
| DC Forward Current                  | 20                      | 20           | mA   |  |  |
| Operating Temperature Range         | -40℃ to + 85℃           |              |      |  |  |
| Storage Temperature Range           | -40℃ to + 100℃          |              |      |  |  |
| Lead Soldering Temperature          | 260℃ for 5 Seconds Max. |              |      |  |  |
| [2.0mm (.079") From Body]           |                         |              |      |  |  |

### 4. Electrical / Optical Characteristics at TA=25°C

| Parameter                           | Symbol | Color        | Min. | Тур. | Max. | Unit | Test Condition     |
|-------------------------------------|--------|--------------|------|------|------|------|--------------------|
| Luminous Intonsity                  | IV     | Yellow Green | 23   | 38   | 65   | mod  | IF=10mA            |
| Luminous Intensity                  | IV     | Red          | 30   | 60   | 90   | mcd  | Note 1,4           |

| Reverse Current                     | IR     | Red          |      |      | 100  | μA   | VR=5V,(Note5, 6)   |

#### **NOTE:**

- 1. Luminous intensity is measured with a light sensor and filter combination that approximates the CIE eye-response curve.
- $2. \theta 1/2$  is the off-axis angle at which the luminous intensity is half the axial luminous intensity.
- 3. The dominant wavelength, λd is derived from the CIE chromaticity diagram and represents the single wavelength which defines the color of the device.
- 4. Iv guarantee must be included with ±30% testing tolerance.
- 5. Reverse current is controlled by dice source.
- 6. Reverse voltage (VR) condition is applied for IR test only. The device is not designed for reverse operation.

### 6. Packing Specification

**Packing Carrier Dimensions** 

- 1. 10 sprocket hole pitch cumulative tolerance ±0.20
- 2. Material: Black Conductive Polystyrene Alloy
- 3. Thickness: 0.50 ±0.06 mm
- 4. Component load per 13" reel : 400pcs

#### **Packing Reel Dimensions**

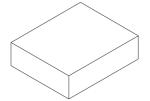

### Through Hole Lamp LTL-R14FEGAJHBPT

### **Carton Specification**

1 Reel with 1 Humidity indicator card and 1 Desiccant are packed in 1 Moisture Barrier Bag (MBB)

2 Moisture Barrier Bags packed in 1 Inner Carton

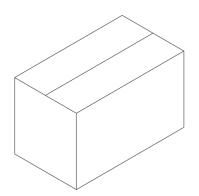

Total 800pcs (400pcs \* 2) per Inner Carton

INNER CARTON 361 x 358 x 75 mm

10 Inner Cartons per Outer Carton

Total 8,000pcs (800pcs\*10) per Outer Carton

OUTER CARTON 740 x 390 x 395 mm

### 7. Bin Table Specification

| Bin Code | Luminous Intensity<br>(Yellow Green)<br>Unit : mcd @10mA |      | Bin Code | Luminous Intensity<br>(Red)<br>Unit : mcd @10mA |      |
|----------|--|------|----------|---|------|
|          | Min.   | Max. |          | Min.  | Max. |
| G1       | 23   | 38   | R1       | 30  | 50   |
| G2       | 38   | 65   | R2       | 50  | 90   |

Note: Tolerance of each bin limit is ±15%

| Bin Code | (Yellow | Openinant Wavelength (Yellow Green) Unit: nm @10mA Bin Cod |   | Dominant Wavelength<br>(Red)<br>Unit : nm @10mA |       |
|----------|---------|--|---|---|-------|
|          | Min.    | Max.   |   | Min.  | Max.  |
| A1       | 565.0   | 568.0  | В | 630.0   | 660.0 |
| A2       | 568.0   | 570.0  |   |   |       |
| А3       | 570.0   | 572.0  |   |   |       |
| A4       | 572.0   | 574.0  |   |   |       |

Note: Tolerance of each bin limit is ±1nm

Part No. : LTL-R14FEGAJHBPT

### Through Hole Lamp LTL-R14FEGAJHBPT

#### 8. CAUTIONS

#### 8.1. Application

This LED lamp is good for application of indoor and outdoor sign, also ordinary electronic equipment.

#### 8.2. Storage

The package is sealed:

The LEDs should be stored at 30℃ or less and 70%RH or less. And the LEDs are limited to use within one year, while the LEDs is packed in moisture-proof package with the desiccants inside.

The package is opened:

The storage ambient for the LEDs should not exceed 30℃ temperature and 60% relative humidity.

It is recommended that LEDs out of their original packaging are IR-reflowed within 168hrs.

For extended storage out of their original packaging, it is recommended that the LEDs be stored in a sealed container with appropriate desiccant, or in a desiccators with nitrogen ambient.

LEDs stored out of their original packaging for more than 168hrs should be baked at about 60 deg C for at least 48 hours before solder assembly.

For unused component, we strongly suggest to do baking following above condition before go SMT assembly process (IR reflow) if the MBB had been opened over 168 hours to prevent MBB from not repacking well or environment moisture over standard required condition which might cause the LEDs function fail.

#### 8.3. Cleaning

Use alcohol-based cleaning solvents such as isopropyl alcohol to clean the LEDs if necessary.

#### 8.4. Lead Forming & Assembly

During lead forming, the leads should be bent at a point at least 3mm from the base of LED lens. Do not use the base of the lead frame as a fulcrum during forming. Lead forming must be done before soldering, at normal temperature. During assembly on PCB, use minimum clinch force possible to avoid excessive mechanical stress.

#### 8.5. Soldering

When soldering, leave a minimum of 2mm clearance from the base of the lens to the soldering point. Dipping the lens into the solder must be avoided. Do not apply any external stress to the lead frame during soldering while the LED is at high temperature.

#### **Recommended soldering conditions:**

|   | Soldering iron  | Wave soldering   |   |  |
|---|---|--|---|--|
| Temperature<br>Soldering time<br>Position | 350℃ Max. 3 seconds Max. (one time only) No closer than 2mm from the base of the epoxy bulb | Pre-heat Pre-heat time Solder wave Soldering time Dipping Position | 120℃ Max.<br>100 seconds Max.<br>260℃ Max.<br>5 seconds Max.<br>No lower than 2mm from the base of the epoxy bulb |  |

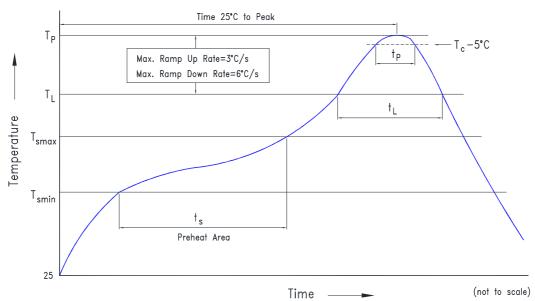

Note: Excessive soldering temperature and/or time might result in deformation of the LED lens or catastrophic failure of the LED. IR reflow is not suitable process for through hole type LED lamp product. Max temperature of wave soldering is not means that Holder's HDT/Melting temperature.

### Through Hole Lamp LTL-R14FEGAJHBPT

| Reflow soldering process  |                  |  |  |  |  |
|---|------------------|--|--|--|--|
| Profile Feature   | Conditions       |  |  |  |  |
| Preheat/Soak  |                  |  |  |  |  |

| Time (t <sub>L</sub> ) maintained above T <sub>L</sub>                        | 60~150 seconds   |  |  |  |  |
| Peak temperature (T <sub>P</sub> )*   | <b>255</b> ℃     |  |  |  |  |
| Specified classification temperature (T <sub>C</sub> )                        | <b>250</b> ℃     |  |  |  |  |
| Time (t <sub>P</sub> ) within $5^{\circ}$ C of the temperature T <sub>C</sub> | 30 seconds Max.  |  |  |  |  |
| Time 25 $^{\circ}$ C to peak temperature                                      | 5 minutes Max.   |  |  |  |  |

#### **Profile for Reference**

Note: Excessive soldering temperature and/or time might result in deformation of the LED lens or catastrophic failure of the LED. The lead pitch of LED must match the pitch of the mounting holes on PCB during reflow process. Lead-forming or bending are not suggestion.

### Through Hole Lamp LTL-R14FEGAJHBPT

#### 8.6. Drive Method

An LED is a current-operated device. In order to ensure intensity uniformity on multiple LEDs connected in parallel in an application, it is recommended that a current limiting resistor be incorporated in the drive circuit, in series with each LED as shown in Circuit A below.

#### Circuit model (A)

#### Circuit model (B)

- (A) Recommended circuit
- (B) The brightness of each LED might appear different due to the differences in the I-V characteristics of those LEDs.

#### 8.7. ESD (Electrostatic Discharge)

#### Static Electricity or power surge will damage the LED.

#### Suggestions to prevent ESD damage:

- Use a conductive wrist band or anti- electrostatic glove when handling these LEDs
- All devices, equipment, and machinery must be properly grounded
- Work tables, storage racks, etc. should be properly grounded
- Use ion blower to neutralize the static charge which might have built up on surface of the LEDs plastic lens as a result of friction between LEDs during storage and handing

#### Suggested checking list:

#### **Training and Certification**

- 8.7.1.1. Everyone working in a static-safe area is ESD-certified?
- 8.7.1.2. Training records kept and re-certification dates monitored?

#### Static-Safe Workstation & Work Areas

- 8.7.2.1. Static-safe workstation or work-areas have ESD signs?
- 8.7.2.2. All surfaces and objects at all static-safe workstation and within 1 ft measure less than 100V?
- 8.7.2.3. All ionizer activated, positioned towards the units?
- 8.7.2.4. Each work surface mats grounding is good?

#### **Personnel Grounding**

- 8.7.3.1. Every person (including visitors) handling ESD sensitive (ESDS) items wear wrist strap, heel strap or conductive shoes with conductive flooring?
- 8.7.3.1. If conductive footwear used, conductive flooring also present where operator stand or walk?
- 8.7.3.2. Garments, hairs or anything closer than 1 ft to ESD items measure less than 100V\*?
- 8.7.3.3. Every wrist strap or heel strap/conductive shoes checked daily and result recorded for all DLs?
- 8.7.3.4. All wrist strap or heel strap checkers calibration up to date? Note: \*50V for Blue LED.

#### **Device Handling**

- 8.7.4.1. Every ESDS items identified by EIA-471 labels on item or packaging?
- 8.7.4.2. All ESDS items completely inside properly closed static-shielding containers when not at static-safe workstation?
- 8.7.4.3. No static charge generators (e.g. plastics) inside shielding containers with ESDS items?
- 8.7.4.4. All flexible conductive and dissipative package materials inspected before reuse or recycle?

#### **Others**

- 8.7.5.1. Audit result reported to entity ESD control coordinator?
- 8.7.5.2. Corrective action from previous audits completed?
