## CSP LTST-A07RGB

### 1. Description

CSP LED from Lite-On are available in miniature sizes and special configurations for automated PC board assembly and space-sensitive applications. These CSP LED are suitable for use in a wide variety of electronic equipment, including cordless and cellular phones, notebook computers, network systems, home appliances, and indoor signboard applications.

#### 1.1 Features

- Meet ROHS.
- Extra Thin (0.2Hmm) Full Color CSP LED
- Ultra Bright InGaN / AlInGaP CSP LED.
- Package in 8mm tape on 7" diameter reels.
- EIA STD Package.
- I.C. Compatible.
- Compatible with Automatic Placement Equipment.
- Compatible with Infrared Reflow Solder Process.

#### 1.2 Applications

- Telecommunication, Office automation, home appliances, industrial equipment
- Keypad/Keyboard Backlighting
- Status indicator
- Micro displays
- Signal and Symbol Luminary

### 2. Package Dimensions

| Part No.    | Lens Color     | Source Color | Pin Assignment |
|-------------|----------------|--------------|----------------|
| LTST-A07RGB | White Diffused | AlInGaP Red  | 1,6            |
|             |                | InGaN Green  | 2,5            |
|             |                | InGaN Blue   | 3,4            |

#### Notes:

1. All dimensions are in millimeters.
2. Tolerance is  $\pm 0.05$  mm (.004") unless otherwise noted.
3. Chip shift  $\pm 15 \mu$  m

## CSP LTST-A07RGB

### 3. Rating and Characteristics

#### 3.1 Absolute Maximum Ratings at Ta=25°C

| Parameter  | LTST-A07RGB          |     |       | Unit |
|--|----------------------|-----|-------|------|
|  | Blue                 | Red | Green |      |
| Power Dissipation  | 30                   | 60  | 30    | mW   |
| Peak Forward Current<br>(1/10 Duty Cycle, 0.1ms Pulse Width) | 100                  | 80  | 100   | mA   |
| DC Forward Current   | 10                   | 20  | 10    | mA   |
| Electrostatic Discharge Threshold (HBM)                      | 2000                 |     |       | V    |
| Operating Temperature Range                                  | -30 °C to + 80 °C    |     |       |      |
| Storage Temperature Range                                    | -30 °C to + 100 °C   |     |       |      |
| Infrared Soldering Condition                                 | 260°C For 10 Seconds |     |       |      |

#### Notes :

1. HBM : Human Body Model.

#### 3.2 Suggest IR Reflow Condition For Pb Free Process:

## CSP LTST-A07RGB

### 3.3 Electrical / Optical Characteristics at Ta=25°C

| Parameter                | Symbol            |      | LTST-A07RGB |     |       | Unit | Test Condition   |
|--------------------------|-------------------|------|-------------|-----|-------|------|--|
|                          |                   |      | Blue        | Red | Green |      |  |
| Luminous Intensity       | IV                | MIN. | 20          | 28  | 120   | mcd  | IF : Blue=1.7mA,<br>Red=1.7mA,<br>Green=1.7mA,<br>Note 1 |
|                          |                   | MAX. | 50          | 55  | 240   |      |  |
| Viewing Angle            | 2θ <sub>1/2</sub> | TYP. | 140         |     |       | deg  | Fig.5  |
| Peak Emission Wavelength | λ <sub>P</sub>    | TYP. | 471         | 625 | 534   | nm   | Measurement<br>@Peak (Fig.1)                             |
| Dominant Wavelength      | λ <sub>d</sub>    | MIN. | 464         | 618 | 526   | nm   | IF : Blue=1.7mA,<br>Red=1.7mA,<br>Green=1.7mA,<br>Note 3 |
|                          |                   | TYP. | -           | -   | -     |      |  |
|                          |                   | MAX. | 474         | 628 | 536   |      |  |
| Spectral Line Half-Width | Δλ                | TYP. | 25          | 20  | 35    | nm   |  |
| Forward Voltage          | VF                | MIN. | 2.1         | 1.5 | 2.1   | V    | IF : Blue=1.7mA,<br>Red=1.7mA,<br>Green=1.7mA,           |
|                          |                   | MAX. | 3.1         | 2.4 | 3.1   |      |  |
| Reverse Current          | IR                | MAX  | 10          | 10  | 10    | μA   | VR = 5V<br>Note 5  |

#### Notes:

1. Luminous intensity is measured with a light sensor and filter combination that approximates the CIE eye-response curve.
2. Iv classification code is marked on each packing bag.
3. The chromaticity coordinates (x, y) is derived from the 1931 CIE chromaticity diagram.
4. Caution in ESD:  
Static Electricity and surge damages the LED. It is recommend to use a wrist band or anti-electrostatic glove when handling the LED. All devices, equipment and machinery must be properly grounded.
5. Reverse voltage (VR) condition is applied to IR test only. The device is not designed for reverse operation

## CSP LTST-A07RGB

### 4. Bin Rank

#### 4.1 Bin code list

##### ■ IV Rank

| Luminous Intensity |  | Color: Red Unit: mcd @1.7mA |      |
|--------------------|--|-----------------------------|------|
| Bin Code           |  | Min.                        | Max. |
| N1                 |  | 28.0                        | 41.5 |
| N2                 |  | 41.5                        | 55.0 |

Tolerance on each Luminous Intensity bin is +/- 10%

| Luminous Intensity |  | Color: Green Unit: mcd @1.7mA |       |
|--------------------|--|-------------------------------|-------|
| Bin Code           |  | Min.                          | Max.  |
| R1                 |  | 120.0                         | 240.0 |

Tolerance on each Luminous Intensity bin is +/- 10%

| Luminous Intensity |  | Color: Blue Unit: mcd @1.7mA |      |
|--------------------|--|------------------------------|------|
| Bin Code           |  | Min.                         | Max. |
| L2                 |  | 20.0                         | 35.0 |
| M1                 |  | 35.0                         | 50.0 |

Tolerance on each Luminous Intensity bin is +/- 10%

## CSP LTST-A07RGB

### ■ Hue Rank

| Dominant Wavelength |       | Color: Red Unit: nm @1.7mA |
|---------------------|-------|----------------------------|
| Bin Code            | Min.  | Max.                       |
| A                   | 618.0 | 623.0                      |
| B                   | 623.0 | 628.0                      |

Tolerance for each Dominant Wavelength bin is +/- 1nm

| Dominant Wavelength |       | Color: Green Unit: nm @1.7mA |
|---------------------|-------|------------------------------|
| Bin Code            | Min.  | Max.                         |
| C                   | 526.0 | 531.0                        |
| D                   | 531.0 | 536.0                        |

Tolerance for each Dominant Wavelength bin is +/- 1nm

| Dominant Wavelength |       | Color: Blue Unit: nm @1.7mA |
|---------------------|-------|-----------------------------|
| Bin Code            | Min.  | Max.                        |
| E                   | 464.0 | 469.0                       |
| F                   | 469.0 | 474.0                       |

Tolerance for each Dominant Wavelength bin is +/- 1nm

## 6. User Guide

## 6.1 Cleaning

Do not use unspecified chemical liquid to clean LED they could harm the package.

If clean is necessary, immerse the LED in ethyl alcohol or in isopropyl alcohol at normal temperature for less one minute.

## 6.2 Recommend Printed Circuit Board Attachment Pad

### 6.3 Package Dimensions Of Tape And Reel

**Note:**

1. All dimensions are in millimeters (inches).

## CSP LTST-A07RGB

### 6.4 Package Dimensions of Reel

#### Notes:

- Empty component pockets sealed with top cover tape.
- 7 inch reel-6000 pieces per reel.
- Minimum packing quantity is 500 pieces for remainders.
- The maximum number of consecutive missing lamps is two.
- In accordance with ANSI/EIA 481 specifications.

## CSP LTST-A07RGB

### 7. Cautions

#### 7.1 Application

The LEDs described here are intended to be used for ordinary electronic equipment (such as office equipment, communication equipment and household applications). Consult Liteon's Sales in advance for information on applications in which exceptional reliability is required, particularly when the failure or malfunction of the LEDs may directly jeopardize life or health (such as in aviation, transportation, traffic control equipment, medical and life support systems and safety devices).

#### 7.2 Storage

The package is sealed:

The LEDs should be stored at 30°C or less and 90%RH or less. And the LEDs are limited to use within one year, while the LEDs is packed in moisture-proof package with the desiccants inside.

The package is opened:

The storage ambient for the LEDs should not exceed 30°C temperature or 60% relative humidity.

It is recommended that LEDs out of their original packaging are IR-reflowed within one week. (MSL 3).

For extended storage out of their original packaging, it is recommended that the LEDs be stored in a sealed container with appropriate desiccant, or in a desiccators with nitrogen ambient.

LEDs stored out of their original packaging for more than one week should be baked at about 60 deg C for at least 20 hours before solder assembly.

#### 7.3 Cleaning

Use alcohol-based cleaning solvents such as isopropyl alcohol to clean the LED if necessary.

#### 7.4 Soldering

Recommended soldering conditions:

| Reflow soldering |                               | Soldering iron |                                |
|------------------|-------------------------------|----------------|--------------------------------|
| Pre-heat         | 150~200°C                     | Temperature    | 300°C Max.                     |
| Pre-heat time    | 120 sec. Max.                 | Soldering time | 3 sec. Max.<br>(one time only) |
| Peak temperature | 260°C Max.                    |                |                                |
| Soldering time   | 10 sec. Max. (Max. two times) |                |                                |

#### Notes:

Because different board designs use different number and types of devices, solder pastes, reflow ovens, and circuit boards, no single temperature profile works for all possible combinations.

However, you can successfully mount your packages to the PCB by following the proper guidelines and PCB-specific characterization.

LITE-ON Runs both component-level verification using in-house **KYRAMX98** reflow chambers and board-level assembly. The results of this testing are verified through post-reflow reliability testing. Profiles used at LITE-ON are based on JEDEC standards to ensure that all packages can be successfully and reliably surface mounted.

Figure on page3 shows a sample temperature profile compliant to JEDEC standards. You can use this example as a generic target to set up your reflow process. You should adhere to the JEDEC profile limits as well as specifications and recommendations from the solder paste manufacturer to avoid damaging the device and create a reliable solder joint.

## CSP LTST-A07RGB

### 7.5 Drive Method

A LED is a current-operated device. In order to ensure intensity uniformity on multiple LEDs connected in parallel in an application, it is recommended that a current limiting resistor be incorporated in the drive circuit, in series with each LED as shown in Circuit A below.

**Circuit model A**

**Circuit model B**

(A) Recommended circuit.

(B) The brightness of each LED might appear different due to the differences in the I-V characteristics of those LEDs.

### 7.6 ESD (Electrostatic Discharge)

Static Electricity or power surge will damage the LED.

Suggestions to prevent ESD damage:

- Use of a conductive wrist band or anti-electrostatic glove when handling these LEDs.
- All devices, equipment, and machinery must be properly grounded.
- Work tables, storage racks, etc. should be properly grounded.
- Use ion blower to neutralize the static charge which might have built up on surface of the LED's plastic lens as a result of friction between LEDs during storage and handling.

ESD-damaged LEDs will exhibit abnormal characteristics such as high reverse leakage current, low forward voltage, or "no lightup" at low currents.

To verify for ESD damage, check for "lightup" and  $V_f$  of the suspect LEDs at low currents.

The  $V_f$  of "good" LEDs should be  $>2.0V@0.1mA$  for InGaP product and  $>1.4V@0.1mA$  for AlInGaP product.

## CSP LTST-A07RGB

### 8. Reliability Test

| Classification     | Test Item                                    | Test Condition   | Reference Standard  |
|--------------------|--|--|---|
| Endurance Test     | Operation Life                               | Ta= Under Room Temperature As Per Data Sheet<br>Maximum Rating<br>*Test Time= 1000HRS (-24HRS,+72HRS)  | MIL-STD-750D:1026<br>MIL-STD-883D:1005<br>JIS C 7021:B-1  |

## CSP LTST-A07RGB

### 9. Others

The appearance and specifications of the product may be modified for improvement without prior notice.

### 10. Suggested Checking List

#### Training and Certification

1. Everyone working in a static-safe area is ESD-certified?
2. Training records kept and re-certification dates monitored?

#### Static-Safe Workstation & Work Areas

1. Static-safe workstation or work-areas have ESD signs?
2. All surfaces and objects at all static-safe workstation and within 1 ft measure less than 100V?
3. All ionizer activated, positioned towards the units?
4. Each work surface mats grounding is good?

#### Personnel Grounding

1. Every person (including visitors) handling ESD sensitive (ESDS) items wears wrist strap, heel strap or conductive shoes with conductive flooring?
2. If conductive footwear used, conductive flooring also present where operator stand or walk?
3. Garments, hairs or anything closer than 1 ft to ESD items measure less than 100V\*?
4. Every wrist strap or heel strap/conductive shoes checked daily and result recorded for all DLs?
5. All wrist strap or heel strap checkers calibration up to date?

Note: \*50V for InGaN LED.

#### Device Handling

1. Every ESDS items identified by EIA-471 labels on item or packaging?
2. All ESDS items completely inside properly closed static-shielding containers when not at static-safe workstation?
3. No static charge generators (e.g. plastics) inside shielding containers with ESDS items?
4. All flexible conductive and dissipative package materials inspected before reuse or recycles?

#### Others

1. Audit result reported to entity ESD control coordinator?
2. Corrective action from previous audits completed?
3. Are audit records complete and on file?
